

Dr. Fernanda Cornejo Granados
National Autonomous University of Mexico, Mexico

Fernanda Cornejo Granados, Ph.D., is a postdoctoral researcher in the Biotechnology Institute at the National Autonomous University of Mexico, where she studies the genomics and transcriptomics of microbiota on shrimp and other animal models, including humans. She obtained her Ph.D. in Biochemical Sciences at the National Autonomous University of Mexico in 2021, working with Dr. Adrián Ochoa Leyva. Today, her research focuses on describing the impact of the gut and hepatopancreas microbiota on the health and development of *L. vannamei* and creating new nutrition strategies to improve the shrimp's health through microbiota engineering.
